

## 1 Policy Statement

RENA Electronica supplies to more than 50 international OEMs in LED lighting and industrial electronics and has over 30 years of experience in lighting. RENA is an SME company and is independently operated. The company works with strong market partners and is located in Zundert.

### **Environmental Policy**

RENA Electronica considers the environmental policy – as well as the need for safety, health and wellbeing – as an integral part of its operational management. Focus is on continuous improvement of the environmental performance. RENA Electronica strives to limit or to prevent the impact of its operations on air, water, land and resources.

### **Environmental legislation, rules & regulations**

Starting point for the environmental policy is to meet all applicable legislation, rules & regulations. Responsibilities and duties have been established and activities have been agreed upon to make sure that the applicable environmental legislation is complied with. RENA Electronica, however, is doing more than required by law if the efforts are in a healthy relation to the results. Environmental measures, that are also effective in the field of safety, health, wellness, quality and efficiency, will get priority.

### **Reduction of the environmental impact**

Most operational processes at RENA Electronica are affecting the environment. By taking precautionary and/or limiting measures, both organizational as well as technical, we try to minimize the environmental impact.

RENA Electronica is already making a large contribution to reducing the use of energy by manufacturing LED lighting products.

RENA Electronica:

- Is responsible when it comes to the use of all necessary raw and auxiliary materials.
- Chooses, where feasible, alternative materials that are less harmful to the environment.
- Lays down the appropriate environmental requirements when purchasing goods and services.
- Handles dangerous substances with care when the use of such substances can't be avoided.
- Works to control and limit waste.
- Measures, registers and evaluates the impact of the overall business on the environment.

In order to achieve these ambitions, targets are annually set, discussed and evaluated.

### **Environmental management system**

In order to implement this environmental policy, RENA operates according to an environmental management system that complies to the international norm ISO 14001:2004.

RENA management has final responsibility for implementing the environmental policy. The environmental policy is documented, implemented, maintained and communicated to all employees. Participation in trainings and courses is encouraged. Employees of RENA Electronica fully support this environmental policy statement and are aware of their responsibility for its execution.
